

Monitor III BT Phono Bluetooth speaker

The Monitor III BT active speaker is a Bluetooth model with the same acoustic features as the famous Monitor III, with an additional 2x25W stereo amplifier, an audio DAC and a wireless audio receiver. The built-in amplifier comes with digital inputs to connect an HD TV, a CD player or any source equipped with coaxial or optical S/PDIF connectors. The DAC is compatible with CD quality audio streams. The Bluetooth receiver allows for wireless audio broadcasting from any smartphone, tablet or PC compatible with Bluetooth technology, which turns out to be very useful to listen to mp3 files or online music. The Monitor III BT speaker also has two stereo analog inputs and one subwoofer output. The USB port enables you to charge a smartphone or tablet, and the provided remote control allows you to select the input source, and also to control your smartphone or tablet in Bluetooth mode.
